/clone libe library layer been
/complete open reading frame (based on known gene sequences available from NCBI's RefSeg). Template for PCR is CDNA derived from either pooled cytoplasmic polyA RNA from 30 cells lines or pooled total RNA from 10 different tissues (from BD Biosciences/Clontech and Washington University).
/cr products are directionally cloned into the loxP sites of the pDNR-bual vector. Library constructed by Dr.
/Narayan Bhat, Earl Bere III and Hongling Liao (Gene Expression Laboratory, Research Technology Program, SAIC Frederick, NCI-Prederick, Frederick, MD 21702). For informattion on which gene each clone represents, please visit our anonymous fig site at fitp://image.llnl.gov/image/rearrayed_plates/IRBK.preSV.dat a Note: this is a NIH_MGC Library."

| Note: thindill; Clones from this library have been complete open reading frame (based on known gene sequences ovallable from NCBI's Refseq). Template for PCR is cDNA derived from either pooled cytoplasmic polya RNA from 30 cells lines or pooled total RNA from 10 different tissues (from BD Biosciences/Clontech and Washington University). PCR products are directionally cloned into the loxP sites of the pDNR-Dual vector. Library constructed by Dr.

/Globeline include in the control of the pure state of the pure in the complete of the control of the control of the control of the complete open reading frame (based on known gene sequences available from NCBI's RefSeq). Template for PCR is cDNA derived from either pooled cytoplasmic polyA RNA from 30 cells lines or pooled total RNA from 10 different tissues (from BD Biosciences/Clontech and Mashington University). PCR products are directionally cloned into the loxP sites of the pDNN-Dual vector. Library constructed by Dr. Narayan Bhat, Earl Bere III and Hongling Liao (Gene Expression Laboratory, Research Technology Program, SAIC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The mount of the property of t

//clome_lib="Windli!; Clones from this library have been
PCR-amplified using gene-specific primers to contain the
complete open reading frame (Dased on known gene sequences
available from NCB1's RefSeq). Template for PCR is CDNA
derived from either pooled cytoplasmic polya RNA from 30
cells lines or pooled total RNA from 10 different tissues
(from BD Biosciences/Clontech and Washington University).
PCR products are directionally cloned into the loxp sites
of the pDNR-Dual vector. Library constructed by Dr.
Narayan Bhat, Barl Bere III and Hongling Liao (Gene
Expression Laboratory, Research Technology Program, SAIC
Frederick, NCI-Frederick, PErederick, MD 21702). For
information on which gene each clone represents, please
visit our annownous ftp site at
fere.//imare lib.

/note="Vector: pDNN-Dual; Site 1: loxP-Sall; Site 2:
loxP-HindIII; Clones from this library have been
PCR-amplified using gene-specific primers to contain the
complete open reading frame (based on known gene sequences
available from NCBI's Refeeg). Template for PCR is cDNA
derived from either pooled cytoplasmic polyA RNA from 30
cells lines or pooled total RNA from 10 different tissues
(from BD Biosciences/Clontech and Mashington University).
PCR products are directionally cloned into the loxP sites

/note="Wettor: pDNR-Dual; Site 1: loxP-Sall; Site 2:
loxP-HindIll; Clones from this library have been
PCR amplified using gene-specific primes to contain the
complete open reading frame (based on known gene sequences
available from NCBI's RefSeq?. Template for PCR is cDNR
derived from either pooled cytoplasmic polya RNA from 30
cells lines or pooled total RNA from 10 different tissues
(from BD Biosciences/Clontech and Washington University).
PCR products are directionally cloned into the loxP sites
of the pDNR-Dual vector. Library constructed by Dr.
Narayan Bhat, Earl Bere III and Hongling Liao (Gene
Expression Laboratory, Research Technology Program, SAIC
Frederick, NCI-Frederick, Prederick, MD 21702). For
information on which gene each clone represents, please
visit our amonymous ftp site a

The present invention relates to the isolation of a novel human G-protein coupled receptor (GPCR) which is related to the chemokine receptor (GPCR) which is related to the chemokine receptor is the family. The coupled the invention are useful for the invention. The sequences of the invention are useful for diagnosing and treating diseases or conditions mediated by human proteases. Such diseases include hyperproliferative diseases (e.g. proteases so, such diseases (e.g. schizophrenia), inflammatory disorders (e.g. psychiatric diseases (e.g. schizophrenia), inflammatory disorders (e.g. diabetes) and respiratory disorders (e.g. adult respiratory disorders syndrome, ARDS). The GPCR protein is also useful for identifying a target for identifying agents for use in mammalian therapeutic applications, c.g. a human drug, particularly modulating a biological or pathological response in a cell or tissue that are related to members of the chemokine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         receptor subfamily, in drug screening assays and in competition binding assays. GPCR is also useful in diagnosing a disease or predisposition to a disease mediated by the peptide, in pharmacogenomic analysis. The polymucleotide sequences can also be used in gene therapy. The present sequence represents the novel human GPCR of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

The invention relates to human G-protein coupled receptor (GCREC) polypeptides and polynucleotides. GCREC polypeptides are useful for screening compounds that modulate their activity. They are useful in the diagnosis, prevention and treatment of disorders which include cell proliferative disorders such as arteriosclerosis, hepatitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel G-protein coupled receptors and polynucleotides useful for diagnosis, treatment and prevention of disorders of cell proliferation, neurological, cardiovascular, metabolic disorders and viral infections.
                                                                                                                                                                                                                                                                                       Human; G-protein coupled receptor 3; cell proliferative disorder; arteriosclerosis; hepatitis; cancer; neurological disorder; epilepsy; Alzheimer's disease; Parkinson's disease; cardiovascular disorder; atherosclerosis; hypertension; myocardial infarction; peptic ulcer; gastrointestrial disorder; dysphagia; anorexia; autoimmune disorder; acquired immune deficiency syndrome; inflammatory disorder; infection; Addison's disease; allergy; Grave's disease; metabolic disorder; AIDS; diabetes; obesity; osteoporosis; gene therapy; GCREC-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CM, Graul

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence represents a human G-protein coupled receptor (GPCR), hRUP19. The endogenous and non-endogenous, constitutively activated versions of human G-protein coupled receptors (GPCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists having applicability as therapeutic agents for treating diseases related to GPCR, e.g. lung cancer. Non-endogenous version of human GPCRs are also utilized in research settings and in vitro and in vivo system, incorporating GPCRs can be utilised to elucidate and understand the roles these receptors play in the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         receptors for direct identification of candidate compounds as agonists, inverse agonists or partial agonists for use as therapeutic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MYNGSCCRIEGDTISQVMPPLLIVAFVLGALGNGVALCGECFHMKTWKESTVYLFNLAVA

the invention describes a novel isolated polynuclectide (I) encoding a human HW74-like G-protein coupled receptor (GPCR) polypeptide. Reagents than HW74-like GPCR are useful for modulating the activity of the protein in a disease selected from bacterial, fungal, protozoan, and viral infection, pain, cancer, anorexia, bulimia, asthma, central nervous system (CNS) disease, cardiovascular disease, hypotension, hypertension, angina pectoris, myocardial infarction, uninary retention, csteoporosis, culcer, asthma, inflammation, allergy, benign prostatic hypertrophy, culcer, asthma, inflammation, allergy, benign prostatic hypertrophy, culcer, asthma, inflammation, allergy, benign prostatic hypertrophy, culcer, asthma, inflammation, allergy, benign prostatic hypertrophy, compliping sclerosis and dyskinesia such as also useful for treating of psychotic and neurological disorders such as anxiety, schizophrenia, manic depression, delirium, dementia and severe mental retardation. (1) psychotic are also useful for treating the above cor the HM74-like GPCR polypeptide are also useful for treating the above cor the HM74-like GPCR pulpeptide are also useful for treating the above core the polypeptide is useful to identify test compounds which may act as agonists or antagonists at the receptor site and which can be regulated to provide therapeutic effects. The polypeptide is also useful as a bait corproduction of polyclonal antibodies. This the amino acid sequence of human HM74-like GPCR described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel isolated polynucleotide, useful for treating infection, pain, cancer, asthma, hypertension, myocardial infarction, urinary retention, osteoporosis, encodes the human HM74-like G-protein coupled receptor
Huntington's disease; Tourette's syndrome; anxiety; schizophrenia; manic depression; delirium; dementia; mental retardation.
